How to Import Products to Your Shopify Store

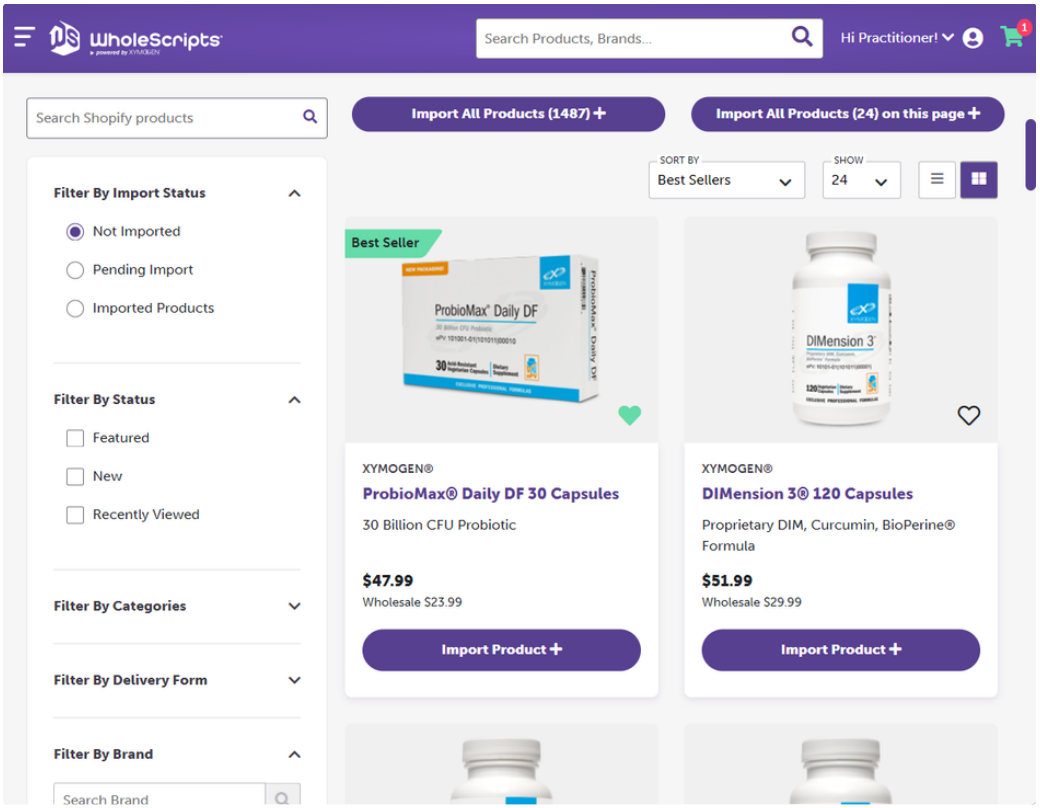

This guide will walk you through the process of efficiently moving your desired products into your Shopify store.

How to Navigate the WholeScripts' Shopify Catalog

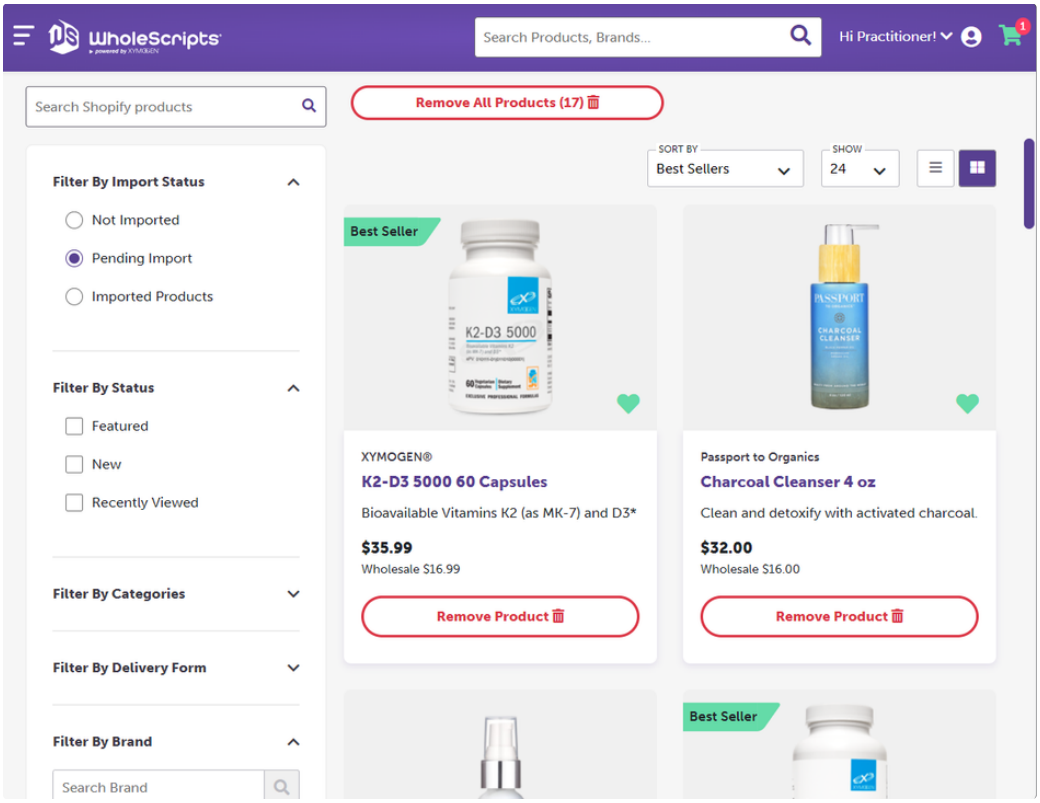

1. Left side Shopify navigation options such as App Status, Import Products, Pending Import, and Imported Products.
2. Dedicated Shopify search bar and catalog of products.
3. Filter products by import status to your Shopify store by "Not Imported", "Pending Import", "Imported Products", and "Failed to Import".
4. Import products to your Shopify store one by one or by bulk actions.
5. Review the product description by clicking the product image.
   Note: When you are in a product detail page, you can go back to the Shopify catalog by clicking the breadcrumb or a status on the Shopify side navigation.

Adding Products to Your Shopify Store

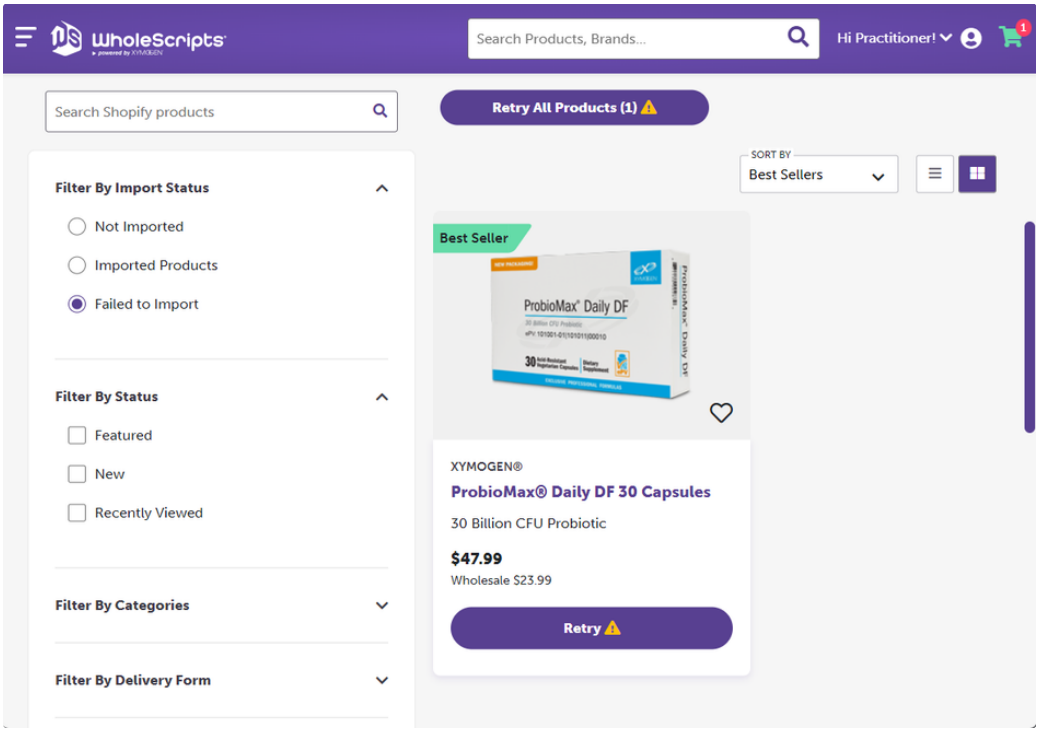

1. Locate the "Filter by Import Status" option.
2. Select "Not Imported" to narrow down your search.
3. To further refine your selection, use the search bar labeled "Search Shopify Products".
4. To import a single product, click on "Import Product +".
5. For bulk import of all products matching your filter criteria, choose "Import All Products +"
6. To import only the products visible on the current page, select "Import All Products on This Page +". (This button shows when there are at least two pages of products)
7. Your product(s) will move to the “Pending Import” status.

Checking on Products with a Pending Import Status

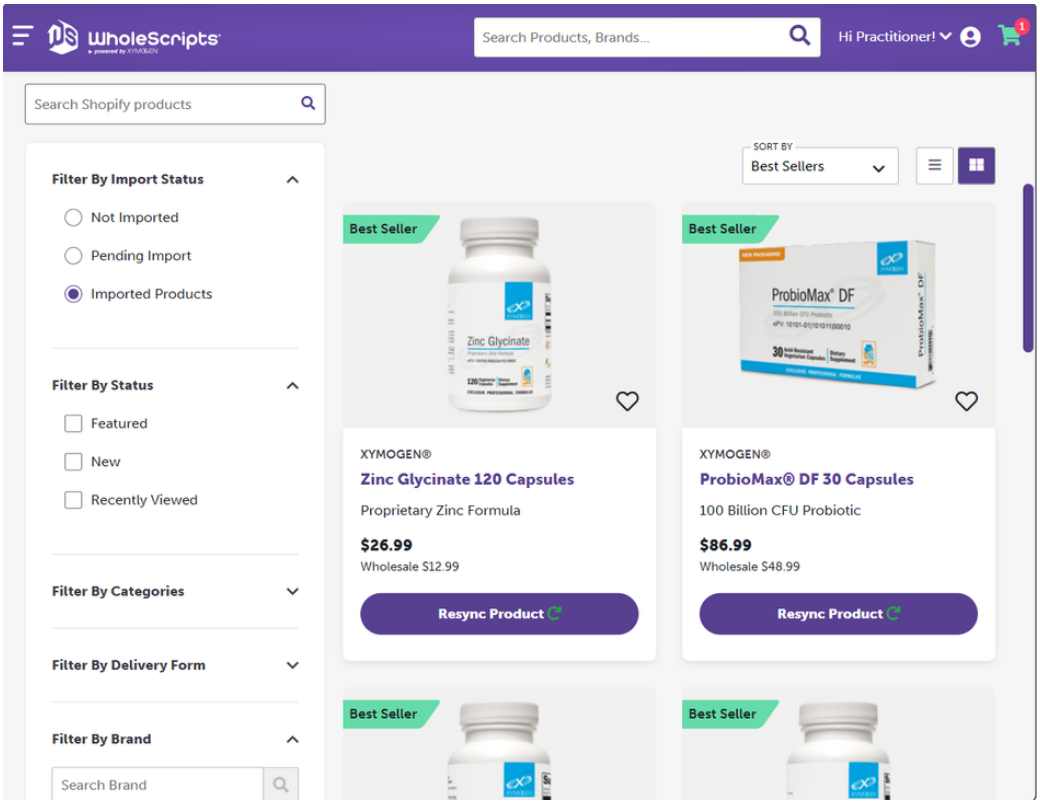

1. Locate the "Filter by Import Status" option.
2. Select "Pending Import" to narrow down your search.
3. To remove a product from this status, select "Remove Product"
4. For bulk removal of all products matching your filter criteria, choose "Remove All Products."
5. To remove only the products visible on the current page, select "Remove All Products on This Page". (This button shows when there are at least two pages of products)
6. Note: It can take up to 10 minutes to import products to your Shopify store. Products on this status move to “Imported Products” status when the import is successful or “Failed to Import” when unsuccessful.

Managing Products with Failed to Import Status

1. Locate the "Filter by Import Status" option.
2. Select "Failed to Import" to narrow down your search.
3. To make another attempt at importing a product, select "Retry".
4. For bulk import of all products matching your filter criteria, choose "Retry All Products".
5. To retry only the products visible on the current page, select "Retry All Products on This Page". (This button shows when there are at least two pages of products)
6. Note: If “Retry” is clicked, your product(s) will move to “Pending Import” status where it can take up to 10 minutes for the “Pending Import” status to be updated.

Updating Products with Imported Products Status

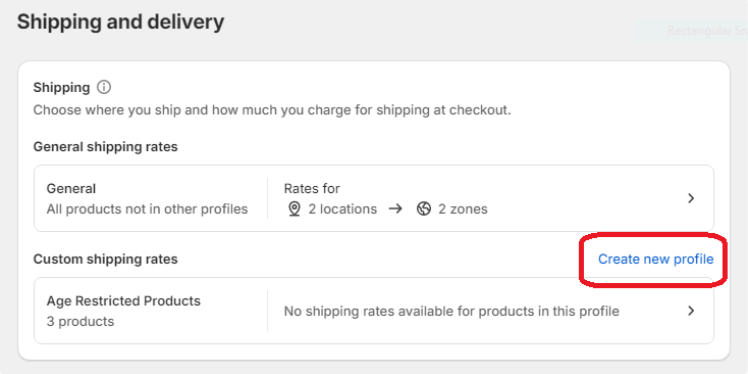

1. Locate the "Filter by Import Status" option.
2. Select "Imported Products" to narrow down your search.
3. To synchronize a product with any updates, choose "Resync Product."

Restrict products from a location in Shopify

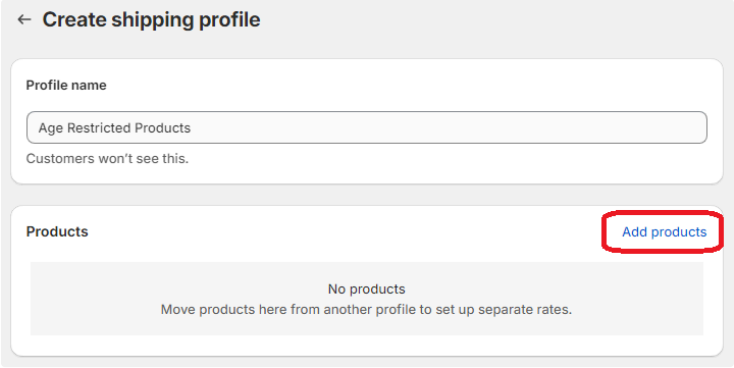

This guide will instruct you on restricting products based on shipping destination in Shopify.

Add an Age Restricted Shipping Profile

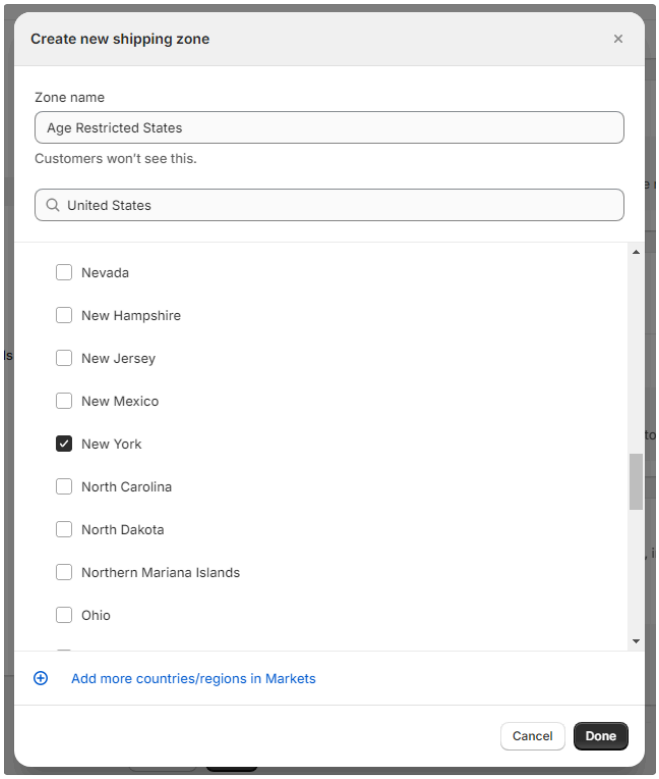

1. Go to your shop “**Settings**” page, and click “**Shipping and delivery**”
2. Under Custom shipping rates, click "**Create new profile**"

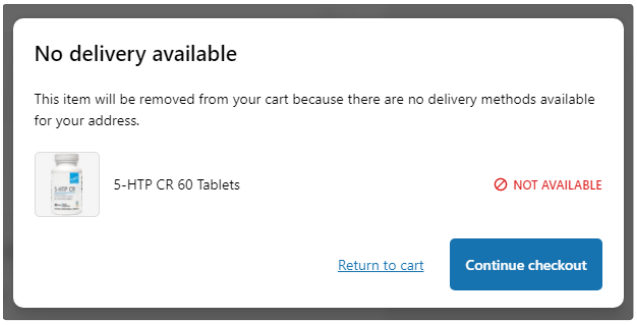

3. Name the profile “**Age Restricted Products**” and click "**Add products**" to add related products to the profile

4. Create a new zone, name it “**Age Restricted States**”, and select the appropriate states
5. Click “**Done**“ to save the profile

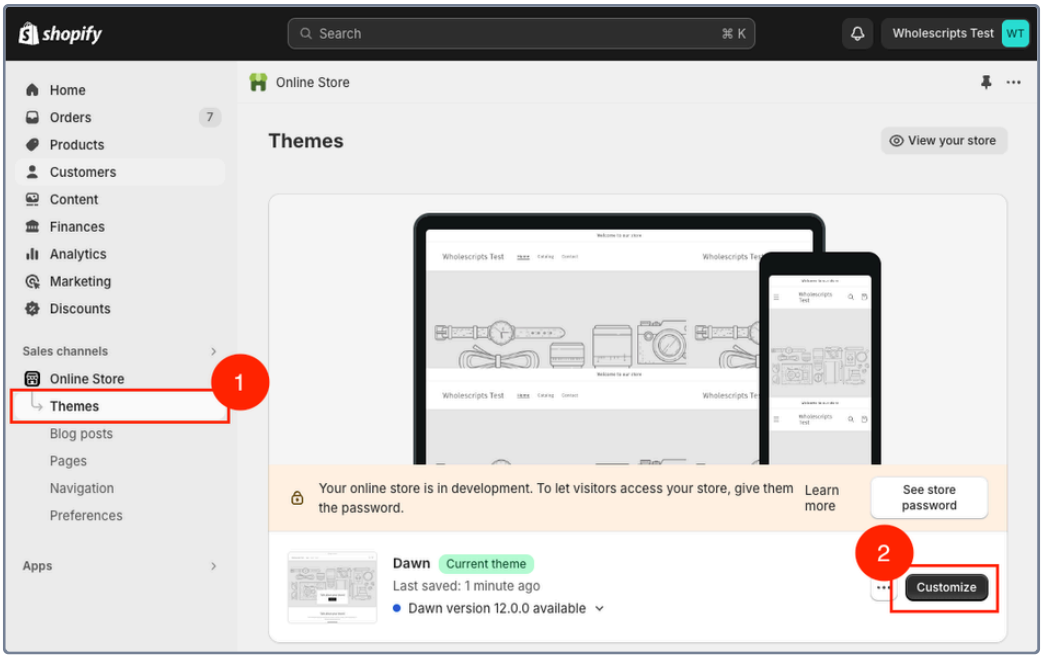

6. When trying to ship products to one of the selected states, a message will appear at checkout

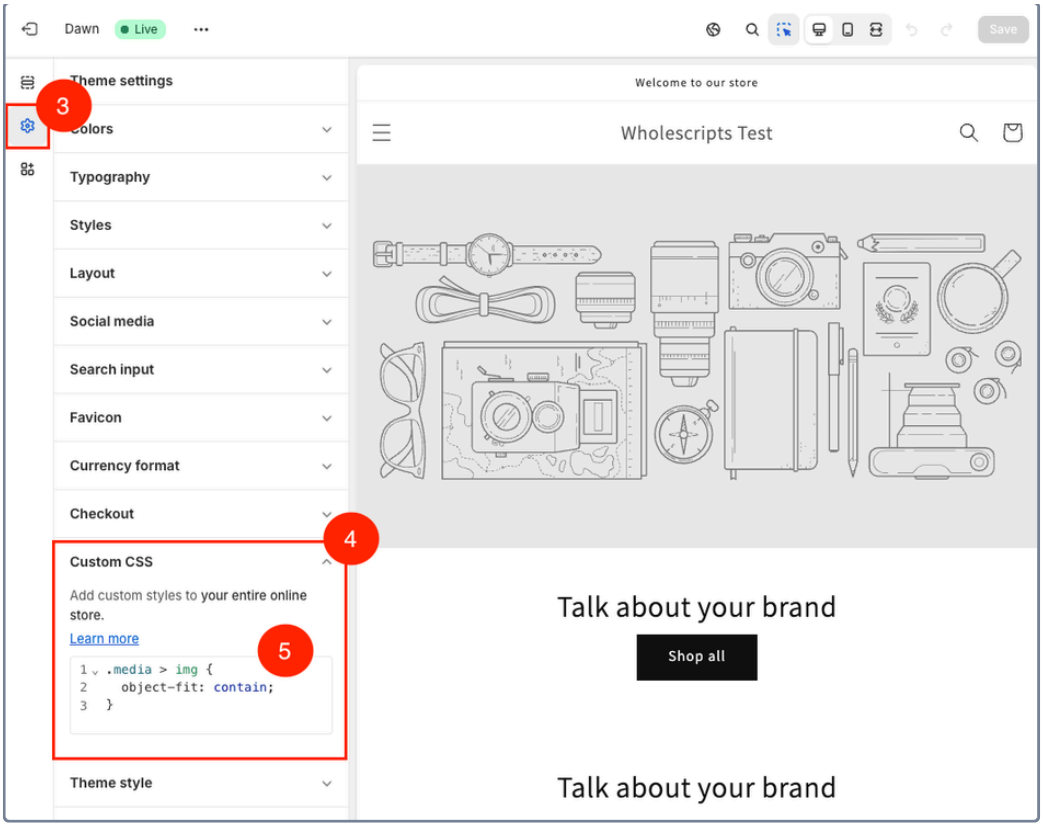

How to fix product and catalog layouts issues on Shopify

This guide will help you with the most common CSS product card and catalog fixes you can implement on your Shopify store.

Fixing Product Misalignment on a Shopify Catalog

1. Once you log in to Shopify, navigate to “**Online Store**” on the left-hand menu and select “**Themes**”.
2. Select “**Customize**” on the site theme you want to edit.

3. Click the "**Theme Settings**" (gear icon) on the left column.
4. Navigate down to the "Custom CSS" tab.
5. On the text field, copy one of the two options available below. You might need to try both as each Shopify theme is different.
   Note: You will not see any changes to your site yet.

Option 1

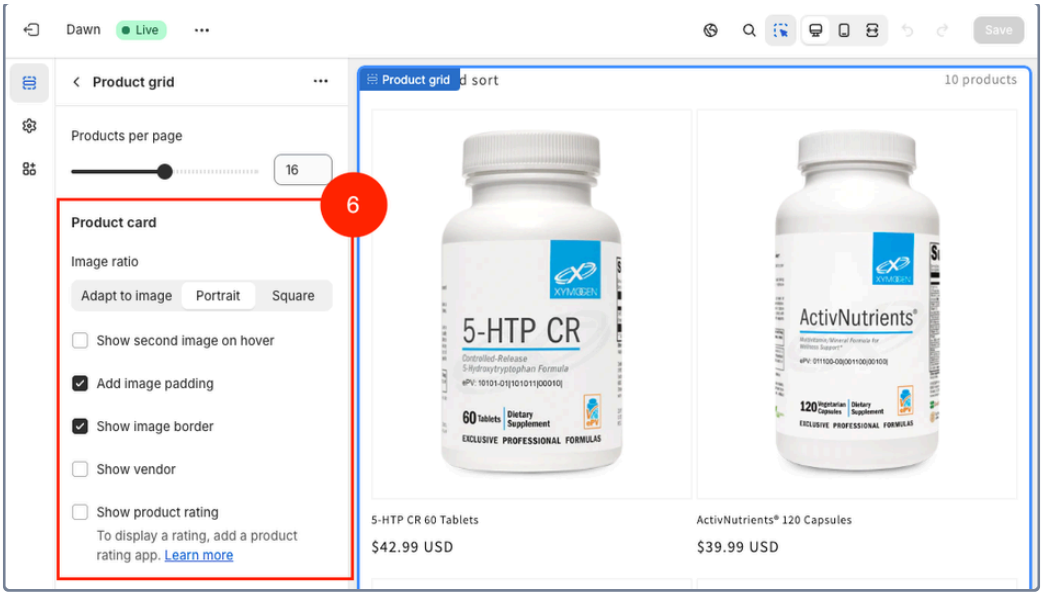

```
.media > img {object-fit: contain;}
```

Option 2

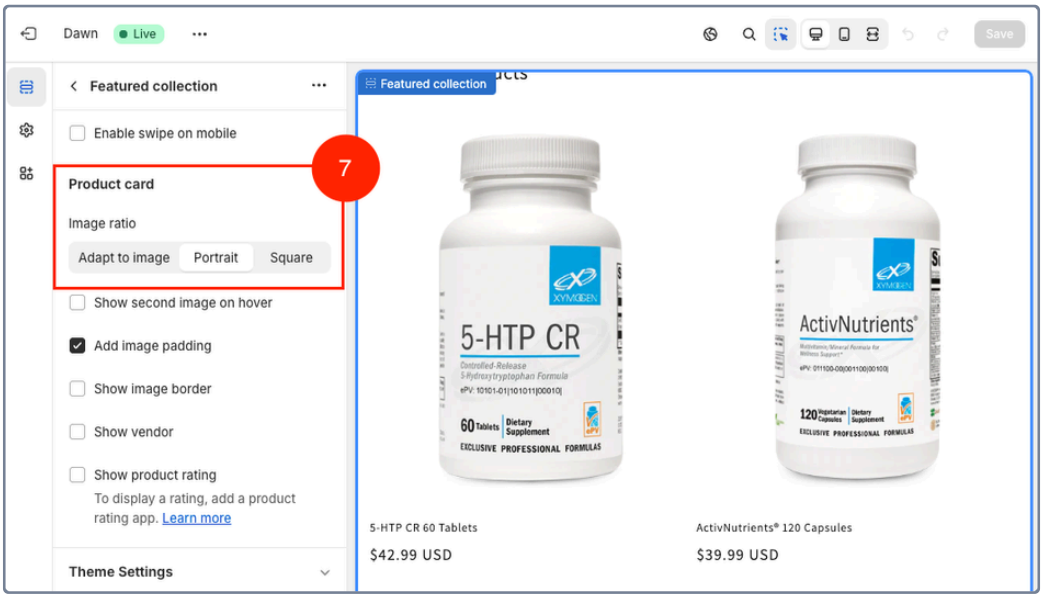

```
.card__media .media img {
object-fit: contain;
}

.product-media-container.constrain-height {
max-height: 500px;
}

.product-media-container.constrain-height img {
max-height: 500px;
object-fit: contain;
}
```

6. Go to your catalog page and select "**Product Grid**" for its settings. Find the "**Product Card**" section on the left column. Under the "**Image Ratio**" step, change your images to "**Portrait**" or "**Square**". All the other "**Product Card**" settings are optional. Keep in mind that you might need to try both code options from Step 5 as Shopify themes are different.
   *Note: "**Adapt to Image**" doesn't work with any of the code options from Step 5.*

7. If you use "**Featured Collection**" on the homepage or other pages on your site, make sure to edit the "**Product Card**" to "**Portrait**" or "**Square**". All the other "**Product Card**" settings are optional.
   *Note: "**Adapt to Image**" doesn't work with the code you are implementing.*
